

ENVIRONMENTAL POLICY

OUR MISSION

Protecting the environment is an integral part of our business, success, and future.

OUR VISION

Excellence in environmental performance is achieved through careful planning, support, and active participation.

OUR SUCCESS

Success depends on collaborating with EnergyLink team members, suppliers of choice, and customers, while continually improving environmental performance.

ENERGYLINK WILL ACHIEVE THIS BY:

- Operating in compliance with all applicable laws, regulations, and other legislative requirements while focusing on pollution prevention and minimizing adverse environmental impacts,
- Developing and implementing measures to ensure the sustainable use of materials, resources, and energy,
- Providing support programs aimed at promoting efficient use of materials and resources throughout our operation including water, electricity, raw materials, and other resources, particularly those that are non-renewable,
- Reducing waste through re-use and recycling, and by purchasing recycled, recyclable, or refurbished products and materials where those alternatives are available, economical, and suitable.

All levels of management have the authority to curtail operations as necessary to prevent serious environmental impacts. All personnel share this responsibility and are accountable for the successful implementation of this policy.

EnergyLink is committed to being a steward in environmental leadership and through action and awareness we strive to create a better world around us.

Harold Wong | President and CEO
